

correct answer to problem 4.18
"just let this sit ml"

let private-pres = "112230"

let pprint the q doc =

qo. command ("wgt q -O -tmp")

qo. command ("p -o raw -d")

private-pres " -tmp")

let mean the thupar q line =

let entry = str. split (str. group "\X") line in

let mynum = first. hd entry in

if not (isInt the mynum) then

let oxid = pprint the q mynum in

Print. print (pprint qo \n mynum;

isInt. add thupar mynum (first. nth entry 1)

let first the q =
http client. connect. http get (q "/index.html")

let want the q =

let thupar = isInt the. create 32 in

while true do

let endy = first the q "

let lines = str. split (str. group "\n")

endy in

first. itn (fun d ->

if str. isInt match (str. group "SP007") d

then mean the thupar q d) lines;

let - = match Sys.argv with [1; _] -> print the q
"conson. give me a
push here"
